Professional information for experts

Thevo
by Thomashilfen

With the mobility seat by Thevo
children now finally
sit stable *AND* dynamic at the same time

Item code: 95733, status: 10/2009, subject to technical alterations

Problem

... in the supply of seating systems for children with special needs

Hitherto one had to decide:

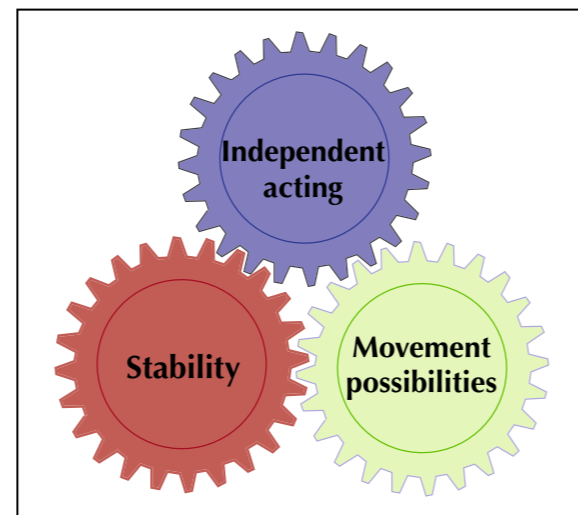

Stability OR movement ?

Up to now stabilization was achieved on the expense of the movement possibilities.

The solution

Thevo - The mobility seat for children
Stability AND movement

The mobility seat now offers optimum support to the children and at the same time the possibility for small movements of the trunk. This finally creates the best possible conditions for the children to carry out well directed activities with their arms and hands.

The mobility seat provides for a well-balanced ratio between all three requirements
Source: IGAP 2008

“Many children who depend on a seating system are not able to independently adapt their posture background to their changing needs.

The mobility seat supports with MiS Micro-Stimulation® them in their posture work and at the same time during controlled trunk movements.

Finally one does not have to decide between stability and movement anymore.”
